PROFESSIONAL SUMMARY

Data Scientist specializing in machine learning, predictive modeling, and time series forecasting, with hands-on experience building production-oriented analytical systems across finance, aviation, and user behavior domains.

Proven ability to **translate messy real-world data into deployable insights** and train others in applied data analysis. Strong focus on execution, model performance, and business relevance—not just experimentation.

CORE SKILLS

Machine Learning:

Classification, Regression, Time Series Forecasting, Feature Engineering, Model Evaluation

Programming & Data:

Python, Pandas, NumPy, Data Cleaning, Exploratory Data Analysis

Data Visualization:

Matplotlib, Seaborn, Tableau

Tools & Workflow:

Git, GitHub, Jupyter Notebook

Professional Strengths:

Analytical Thinking, Technical Communication, Independent Execution

PROFESSIONAL EXPERIENCE

Data Analysis Trainer (Part-Time)

Trainify Institute of Technology – Nairobi (Remote/Hybrid)

- Delivered structured training in Python-based data analysis (Pandas, NumPy, visualization)
 - Mentored multiple cohorts through real-world data projects and analytical workflows
 - Translated complex data concepts into practical, industry-relevant skills
 - Guided students in building end-to-end analysis projects from raw data to insights
-

PROJECTS

User Behaviour Prediction (Machine Learning)

 https://github.com/T31SHA/User-Behaviour_Prediction

- Built a classification model to predict user behavior patterns from structured data
 - Applied feature engineering and model evaluation to improve predictive performance
 - Demonstrates practical application of behavioral analytics in digital systems
-

Customer Churn Prediction (Machine Learning)

 https://github.com/T31SHA/Customer-Churn_Prediction

- Developed a predictive model to identify customers at risk of churn
 - Performed data preprocessing, feature selection, and evaluation
 - Applicable to subscription-based businesses for retention optimization
-

NSE Stock Market Prediction (Time Series Forecasting)

 https://github.com/T31SHA/NSE--Stock-Market_Predictions

- Built a time series forecasting model using historical stock data
 - Applied trend analysis and predictive techniques for financial insights
 - Demonstrates ability to work with sequential and high-variance data
-

Aviation Risk Analysis (Data Analysis)

 https://github.com/T31SHA/Aviation-Risk_Analysis

- Analyzed aviation datasets to identify operational risk patterns
 - Applied exploratory data analysis and statistical reasoning
 - Supports safety-focused decision-making in complex environments
-

Food Security Analysis (Data Visualization & Analytics)

 https://github.com/T31SHA/Food-Security_Analysis

- Developed analytical dashboards and visualizations for food distribution trends
 - Generated insights to support resource allocation and planning
 - Focused on real-world humanitarian data challenges
-

Food Prediction System (Machine Learning)

 https://github.com/T31SHA/Food_prediction-ke

- Built a predictive model for food-related data analysis and forecasting
 - Applied machine learning techniques to uncover trends and patterns
 - Demonstrates domain-specific application of ML
-

EDUCATION

Moringa School — Data Science (*Ongoing*)

Moringa School — Data Visualization with Python (*2025*)

CERTIFICATIONS

- Data Visualization with Python — Moringa School
 - ICDL Certification
-

ACHIEVEMENTS

- Best Problem Solver — Moringa School Bootcamp
 - Top 10% — Kaggle Data Visualization Challenge
-

LANGUAGES

English (Fluent)

Kiswahili (Fluent)

Somali (Native)

CAREER OBJECTIVE

To build impactful data and AI-driven solutions by leveraging machine learning and analytical expertise, while continuously advancing toward becoming a world-class Data Scientist.
